| Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |                                                                                                                                                                                                                                                     |
| <p>Chitomur is a natural peptide complex extracted from the bladder of young animals (calves no older than 12 months of age). Such peptides have beneficial effects on the bladder wall cells by regulating their function and metabolism and stimulating detrusor muscle tone.</p> <p>Clinical studies have shown that Chitomur is effective in maintaining and restoring the bladder function that may be affected by environmental hazards, poor diet and various diseases (chronic cystitis, urinary incontinence, pelvic organ prolapse, prostate diseases, climacteric syndrome etc.)</p> |                                                                                                                                                                                                                                                     |
| Purpose:                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |                                                                                                                                                                                                                                                     |
