

MAMITON - onco-protector for female reproductive system

	❖ Healing and prophylactic preparations ❖ Mamiton
	Vendor code: 60518
	BUY MAMITON
Description	
Onco-protector for female reproductive system The drug is based on natural ingredients, which normalize the female reproductive system, improves the immune status of the body, has a powerful antioxidant, antimitotic action particularly at risk of developing cancer pathology associated with hormonal disorders. Resveratrol, which is part of the drug, not only prevents the development of malignant tumors, but also reduces the risk of osteoporosis, as well as stimulates the synthesis of collagen, thereby improving skin and hair.	
Directions	
Adults and children over 14 years: 1 capsule 1-2 times a day during meals. Course duration is 1 month. Possible to repeat the course 3-4 times a year.	
Ingredients	
Extracts : horsetail , nettle, kelp thallus , motherwort , rosehips , knotweed , mint , hops , walnut ; resveratrol, vitamins A and E. Auxiliary materials : MCC or lactose , calcium stearate . Recommended as a source of resveratrol and additional source of vitamins A and E.	
Recommended application:	
• various forms of mastitis, • menstrual cycle, • prevention of hormone-dependent diseases of the female reproductive system (breast, uterus and appendages), • prevention of female cancer pathology.	

- smooth and soft correction of the endocrine system,
- optimization of the female hormonal status.

Main components

The herb horsetail

Horsetail has a wide range of medicinal properties has on the body restorative and cleansing action, anti-inflammatory, antimicrobial, antiseptic, antihelminthic, diuretic, wound healing, astringent. In addition, the plant increases blood clotting, providing a hemostatic effect. But that's not all, have a lot of horsetail healing properties inherent in the very few herbs:

- strengthens the immune properties of the body, strengthens the walls of blood vessels (so horsetail grass is recommended for atherosclerosis of the heart and brain);

- excrete salt, toxins, there is evidence that horsetail brings even radioactive nucleotides, which is extremely important for people in the zone of increased radiation.

A valuable feature of horsetail is that it improves the water-salt metabolism, prevents the formation of urinary stones. But this is not yet limited range of curative action of horsetail, which is also good vitamins means. The use of horsetail gives good results in gall and kidney stones. Horsetail has a bracing effect of tuberculosis. It also has hypotensive action, that is, lowers blood pressure, and therefore, it is used for hypertension, it is effective in cardiovascular disease, edema (horsetail in these cases is used as a diuretic), and internal and external bleeding. Since horsetail improves the water-salt metabolism, it is used to treat gout, dropsy. Horsetail is very good for diseases such as inflammation of the bladder, jaundice, atonic uterus, ocular inflammatory diseases, acute and chronic lead poisoning, heavy menstruation, skin diseases (lichen, eczema), swelling and other congestion on the ground of insufficient blood circulation and kidney diseases, ulcers, bowel, Addison's disease, sciatica, headaches, inflammation and ulcerative processes in the mucosa of the mouth, deficiency diseases, liver diseases.

Nettle extract

Nettle extract is endowed with a huge number of healing properties. He is an excellent antiseptic, hemostatic and anti-inflammatory properties. This extract is also inherent wound healing, diuretic, laxative, choleric and tonic effect. Get rid of the accumulated phlegm available pain and seizures also help extract of the herb. Much to the surprise of a huge number of the population has been identified and that the extract can be used in the fight against cancer. This extract cope with many genitourinary and gynecological diseases.

Thallus kelp

The therapeutic effect is primarily due to the presence therein of organic compounds and iodine. Iodine improves protein assimilation, absorption of phosphorus, calcium and iron, activates several enzymes. Under the influence of iodine decreases blood viscosity, lowers the tone of blood vessels and blood pressure.

Laminaria reduces cholesterol in blood plasma, retards the development of experimental atherosclerosis in rats and rabbits. Phytohormones and vitamins contained in it stimulates the repair of the mucous membranes of the nose, mouth, intestines, female genital mutilation, and so on. G. Halogen group elements (chlorine, iodine, bromine) has a

disinfecting effect. Iodine kelp has a regulating effect on the menstrual cycle, ovaries and thyroid gland, reduces the pathologic manifestations preklímaksa. In experiments on rats with the use of artificially induced hypothyroidism Laminaria accompanied regression of the disease, and its action is more efficient than inorganic iodine preparations. Polysaccharides kelp has hydrophilic and adsorptive capacity, absorb various endogenous and exogenous toxins from the intestines.

Motherwort

Strange relations have developed motherwort with official medicine. While that is still a long time motherwort considered a remedy for many ailments, doctors could not find a scientific basis for its action, and therefore motherwort, the use of which gave good results, was for a time forgotten, and again began to be used only in the 30s of the 20th century. This time we use the healing properties of motherwort mainly to establish emotional state and before traditional medicine practiced healing with the help of motherwort on a number of diseases, among which are: anemia; high blood pressure; headaches and insomnia; conditions associated with the onset of menopause, as well as delay or painful menstruation; some diseases of the kidneys, heart and gastrointestinal tract. Also, using motherwort facilitate flow and other diseases. Today, for treatment of most diseases above employ other means which are considered more effective. And the healing properties of motherwort is used to treat conditions such as angina, hypertension, cardio, heart diseases, neuroses, insomnia, hysteria, Graves' disease.

Knot-grass

Grass knotweed has curative antimicrobial, anti-inflammatory, diuretic, cholagogue, astringent, hemostatic (including the hemorrhoids and uterine bleeding), restorative, antifouling properties. In addition, it is an excellent astringent that can also increase immunity, lower blood pressure and accelerate wound healing. Sporysh reduces bleeding of mucous membranes. It helps knotweed infertility, as favored by the normal operation of the uterus and ovaries and promotes fertility. And to use for this purpose knotweed should be for both men and women. This medicinal plant is part of a variety of charges, which are recommended for use in cases of chronic gastritis, gastric diseases, pulmonary tuberculosis, kidney disease and other serious illnesses. Sporyš prevent the formation of urinary calculi, which is associated with the content in plants galenic preparations of soluble silica, which is quite high concentrations are removed in the urine. It has a diuretic effect. It is used for tuberculosis, diseases of the liver, jaundice, stomach ulcer, dysentery, malaria and various tumors, kidney stones and gallstones. Through astringent, anti-inflammatory, regenerative, wound-healing properties of knotweed, it can be successfully used for diarrhea, gastric ulcer and 12 duodenal ulcers, colitis, enterocolitis, gastritis with high acidity, bronchitis, pneumonia, weeping eczema, atopic dermatitis and other widely common diseases. Its diuretic properties, the ability to protect and restore the inner membrane of the urinary tract, leading to effective treatment and prevention of pyelonephritis. In gynecology knotweed is used as an excellent hemostatic agent, in the postpartum period - with little reversal of the uterus, uterine bleeding after abortion. Especially knotweed is indicated for iron deficiency anemia caused by bleeding juvenile.

Peppermint

Peppermint has analgesic and vasodilator properties. It improves digestion, eliminates nausea, has choloretic properties, is used in asthma, flatulence. Broth mint drink as a sedative, in inflammatory processes in the bronchi, lungs, as well as cardiovascular,

gynecological diseases.

They relieve pain in the abdomen, heart pains, heartburn. Mint is used as a tonic cordial, removing the heartbeat, stimulates the activity of the heart and blood circulation, has also diaphoretic property. Mint is used to fight colds and fever. Relaxing and anti-inflammatory properties make it a perfect mint medicine for pain and spasms, such as stomach pain, colic, intestinal bloating, heartburn, indigestion, hiccups, headaches, migraines, nausea and motion sickness.

Contained in mint tannins protect the intestines from irritation, which is very useful to relieve cramps with diarrhea, to deal with spastic constipation, and ulcerative colitis. Bitterness mint stimulates the liver and gall bladder, so it is used to cleanse the liver and the removal of stones from the gallbladder.

Hop

Hops has many useful and healing properties. Hops are used in folk medicine for the prevention and treatment of many diseases. Hops are added to many medications.

The hop cones containing resin hmeledubilnaya and valerian acid alkaloid Humulin, a bitter substance lupulin (in its composition of essential oil), as well as dyes and other substances.

Hops are also used in the absence of appetite and menstrual irregularities.

Hops also contains soothing substances and, as one of its components - metilbutinol on which make sleeping pills.

Preparations containing in its composition hops, prescribed for sleep disorders, increased nervous excitability. However, there are restrictions on the use of devices based on the hop: an overdose may be nausea, vomiting, headache, and a feeling of general fatigue.

The infusion of hops are used for the prevention and treatment of many diseases, so hops tincture helps with insomnia, neurasthenia, nervous excitement, in hysteria, epilepsy, neuralgia. The beneficial properties of the hops used in headaches, dizziness, palpitations cardioneurosis with attacks, with increased sexual excitability, frequent pollutions, with painful erections and other sexual function abnormalities neurotic character, climacteric neurosis, dysmenorrhea.

Walnut extract

It has a strong fungicidal, bactericidal, protistotsidnyimi, antiviral, antifungal, antiparasitic, immunomodulatory, antioxidant properties, is a tonic and strengthens the body means. It regulates metabolism in the body, acts as a choleretic, diuretic, wound healing, saharoponizhayuschee tool restores the activity of the gastrointestinal tract, normalizes dishormonal disturbances in the body.

The extract from the leaves of the walnut is an antioxidant, reduces blood sugar levels and has a positive effect on lipid metabolism.

The extract improves the antitoxic activity of hepatocytes, it helps with kidney failure. It has antidiabetic properties. It is used in the broadest spectrum of pathologies, especially if there is a tendency to chronic inflammation, irreversible signs of a pathological process in

oncology.

With the success has proven itself in diseases such as atopic dermatitis, psoriasis, ulcers, acne, diathesis, warts, chronic fatigue, headaches, migraines, inflammatory diseases of the female reproductive organs, dishormonal disorders, fibroids and uterine fibroids.

Resveratrol

Resveratrol (Resveratrol (3,5,4-trigidrostilben)) - is a phytoalexin, one of the major components of the extract of red wine. White grapes and white wines contain little resveratrol. Like all polyphenols, resveratrol - a powerful antioxidant activity which is superior to vitamin E. Resveratrol exhibits estrogenic activity by binding to the same receptors as estradiol, one of the main human estrogen. In contrast to estradiol and dietilstilbestrona that accelerate the development of a number of hormone-dependent tumors and the excess of which is associated with an increased risk of developing breast cancer, resveratrol exhibits multifaceted antitumor effect. Experiments show that it inhibits ribonucleotide reductase and inhibit DNA synthesis mammals by blocking directly tumor cell multiplication. Another mechanism of antitumor action of resveratrol is its competition with estradiol for binding sites on the receptor, which reduces the stimulating effect of estradiol on cell hormone dependent tumors. Like all the phytoestrogens, resveratrol may reduce the risk of osteoporosis, which is often caused by a drop in estrogen levels in women during menopause. The same beneficial effect of resveratrol on the skin by stimulating the synthesis of collagen and preventing it from cross-linking. This effect is explained by the combined antioxidant and estrogenic effects resveratrol. Experimental study received and cardioprotective properties of red wine. It was found that the grape juice and red wine making low density lipoproteins extremely resistant to oxidation under conditions in vitro. Since the oxidation of low density lipoproteins in the blood is a major cause of atherosclerosis, grape polyphenols to prevent such oxidation, should substantially reduce the risk of cardiovascular diseases. Resveratrol - a regulator of fat metabolism in the body. Atherosclerosis of blood vessels associated with the intake of fat food, their absorption in the gastrointestinal tract, the concentration of lipid (cholesterol and triglyceride) in blood plasma deposition and penetration of products of oxidation of lipoprotein (fat + protein) in the blood vessel wall, followed by adhesion of platelets and plaque formation. This leads to a narrowing of the lumen of blood vessels of the heart muscle, brain and other organs.

Vitamin A

Vitamin A (retinol) supports reproductive functions. The first product of the oxidation of retinal - retinal - is involved in the photoreception (view). From retinoic acid dependent growth and integrity of epithelial tissue, including mucosal all three channels: respiratory, power and emissions.

Thus arises in vitamin A deficiency metaplasia, epithelial mucosa of the throat and the nasal airway of predisposes rhinitis, otitis media, bronchitis, pneumonia, plays an important role of vitamin A and in maintaining the structural integrity and function of the digestive tract. With a lack of it there is an upset stomach and intestine appear gastritis, ulcerative colitis and other diseases. Unfortunately, the literature says nothing about the needs of patients in other vitamins and their deficit also has an impact on the course of pathological processes. Diseases of the digestive tract often become chronic, rather than cured, and often give rise to malignancy. According to the materials of the Scientific-Research Institute. NN Petrova, malignant tumors of the stomach in 15% of cases were preceded by long-existing ulcers. However, this applies not only to diseases of the digestive tract. This also gives the Institute

the following data: breast cancer 30% preceded fibroadenomatosis; uterine cancer in 42% of cases - unhealed cervical erosion. It was also found that the various chronic diseases preceded rectal cancer in 73% of oral cancer - in 83.7%, cancer of the lower lip - in 91.7%, and skin cancer - in 97% of cases. In almost all these studies it was established deficiency of vitamin A. For example, when there was a persistent mastitis, more than 40% reduction in the content of vitamin A in the blood. Treatment by the addition of vitamin A in food for 2-3 months resulted in 70% of cases to complete and 20% - partial disappearance of signs of mastitis.

Vitamin E

Vitamin E (tocopherol) is a fat-soluble vitamin. It is an antioxidant, i.e. protects cells from pathological peroxidation, which leads to aging and death. Peroxidation plays an important role in the development of malignancies in the body, so it is believed that the antioxidants protect against cancer. With a lack of vitamin E cells become susceptible to the action of toxic substances, will be damaged, weakened immunity.

Vitamin E is necessary for all the body's tissues. It protects red blood cells, improving the transport of oxygen to the tissues. Because of the effect on blood coagulation prevents the formation of clots in blood vessels. Used for the prevention of atherosclerosis (vitamin E can only slow down the development of atherosclerosis, but not cure it).

The significance of vitamins to the reproductive system, so it is often referred to as "vitamin of reproduction." When vitamin deficiency in men decreased sperm production, women are menstrual disorders, decreased libido.

Vitamin E has a weak estrogen-like activity, so it can partially offset the adverse effects of estrogen deficiency such as decreased libido, dryness of mucous membranes of the genitals, depression, menopausal syndrome (flushing, sweating, mood changes).

Form release:

60 capsules of 0,39 g.
