	<u>BUY TOOTHPASTE WITH MUMIYO</u>
Description	
Toothpaste for caries prevention with Mumiyo	
Purpose:	
• natural stimulator accelerates the regeneration of the mucosa and gums, • modern polishing agents and titanium dioxide provide highly effective cleaning of the teeth, • fluorine-containing component of sodium monofluorophosphate prevents from dental caries, • sodium pyrophosphate helps to remove dental plaque and increases the protection against dental caries, • aktivitin complex and an extract of sage, chamomile, calendula and St. John's wort.	
Application method	
In order to obtain the maximum effect it is recommended to use Revidont Professional toothpaste at least 2 times a day. Children under 7 years of age should brush their teeth only with adult supervision.	
Ingredients	
Sorbitol, purified water, hydrated silicon dioxide, glycerin, "Aktivitin" complex, sodium pyrophosphate, sodium lauryl sulfate, flavorings, mummy, ethylhexylglycerin phenoxyethanol, sodium monofluorophosphate, titanium dioxide, sodium carboxymethyl cellulose, aspartame, saccharin.	
Main components	

Activitin

For thousands of years, traditional medicine has been using natural products from plants, animal and mineral origins. Typically, in traditional practice using medical plants which grow in the regions inhabited by patients, has a deep natural-scientific meaning: the nature of such plants ensures the survival and stability of their own ecosystem.

The technology has been developed and tested from the original two-phase extracts from medicinal plants of northern and central Russia (sage, chamomile, calendula, hpercium), and received its name as a bio-complex ACTIVITIN.

Plant extracts which are produced by the industry, include alcohol, propylene glycol, oil, carbon dioxide, etc.

In contrast to conventional extracts, bio complex ACTIVITIN, biologically active substances contained in the characteristic of the plant, given the nature of relationship that provides the most pronounced healing effect, and technology specialists proposed a two-phase extraction, in contrast to other known methods of extraction retrieves full native complex biological components.

Collect plants for bioflavolipidng complex AKTIVITIN not accidental. The analysis of the extensive literature and own experimental data on the composition of the show that the resulting two-phase of these plants extract contains an exceptionally wide range of biologically active substances: as lipophilic (chlorophylls, carotenoids, phytosterols, terpenoids, fat-soluble vitamins) and hydrophilic (bioflavonoids, tannins, water-soluble vitamins), which provide a comprehensive therapeutic effect both on the problems, reduces skin inflammation, solves the problem of vitamin nutrition, moisturizing, regenerating, antioxidant and antimicrobial protection, improve skin turgor, and the body in general.

Bioflavolipidny Aktivitin complex is widely used in cosmetic products, manufactured by the company.

Mumiyo

Mummies - a rich set of biologically active substances created by nature itself. "Mining Resin" (also called Tears of the mountains), produced in the mountain caves of Central Asia. Mummies - natural mixture of organic and inorganic highly water-soluble substance that collects in rock crevices, cavities, recesses in the form of films, crusts, nodules of black, brown and dark brown tar-like mass.

For the treatment of caries is most often used thick extract of mummy. Only with the combined treatment is a rapid elimination of the main symptoms of the disease, the elimination of local inflammatory responses, delayed development of basic pathological process in the alveolar, improving trophism of the gums and oral mucosa, and general condition.

Clinical and radiological and microbiological analyzes showed that the mummy is a very effective means of contributing to a decrease in 3 times (compared to those patients who received only antibiotics - tetracycline, penicillin and chloramphenicol) bacteria with a complex enzyme aggression. The microflora of the oral cavity and periodontal pockets is almost completely recovered and back to normal.

Form release:
63 g.
Production
Scientific and Production Center of Revitalization and Health St. Petersburg University of Bioregulation and Gerontology
