Description	
Revilab Peptide ML — a line of anti-aging multifunctional preparations. Revilab Peptide ML is a multifunctional preparation of a new generation aimed at slowing down the aging processes, maintaining a normal level of metabolic processes, preventing various pathologies, rehabilitation after serious illnesses, the uniqueness of which lies in the principle of the all-in-one action. Effective action of Revilab Peptide ML is due to the high-tech formula: each of the 9 preparations contains a number of synthesized peptides that have a faster effect on various body systems, triggering the function of restoring internal organs, unique plant components that have powerful antioxidant and anti-age effects and vitamin complexes, They play an important role in maintaining the optimal functioning of immunity.	
Purpose:	
• with chronic bronchitis • with pulmonary emphysema • with respiratory allergy • with bronchial asthma • for prevention of premature aging	
Ingredients	
MCC (carrier), capsule (gelatin, HPMC, food titan dye dioxide), lactose (filler), omega-3 polyunsaturated fatty acids (alpha-linoleic acid, contains carrier sorbitol and maltodextrin), licorice extract, mixture of tocopherols (vitamin E), peptide complex AA-2 (tripeptide consisting of L-glutamic acid, L-aspartic acid and L-proline), calcium stearate (the flowing agent), silicon dioxide (the flowing agent), AA-14 (tripeptide consisting of L-alanine, L-	

glutamic acid, L-aspartic acid and L-leucine acid) and AA-15 (tripeptide consisting of L-glutamic acid, L-aspartic acid, L-glutamic acid and L-glycine), retinol (vitamin A).

Main components

- Peptide of T-cell branch of the immune system (peptide complex AA-2)

It has a selective action on various cells of the immune system, normalizes metabolism in cells and regulates the functions of the immune system.

- Peptide of bronchi (peptide complex AA-14)

It helps to reduce frequency of attacks of coughing fits, bronchial spasm and separation of sputum.

- Peptide of lungs and stomach walls (peptide complex AA-15)

It restores the function of the lungs and bronchi in acute and chronic respiratory diseases, and also restores the function of respiratory system to senior citizens. Peptide complex AA-15 has gastroprotective effect, which reduces the risk of gastric ulcer, but if the risk exists — gastroprotective effect leads to complete healing of the ulcer.

- Licorice root

Medicinal properties of licorice are due to the content of saponins, which when exposed to the human body irritate the mucous membranes in the human body, which helps stimulate the respiratory and digestive organs. It should be noted that recent studies have shown the content of substances in licorice, similar in composition and claims the steroid hormones. These hormones are produced by the adrenal glands naturally and have potent anti-inflammatory effect. The medicinal properties of licorice are described in ancient monuments of Oriental Medicine, which date back several thousand years before our era. For thousands of years, Chinese doctors attributed licorice drug effectiveness of the highest category, including its almost all medicinal drugs. Licorice - not only in itself a great drug, but also a wonderful catalyst for stimulating the healing action of other substances. Tibetan healers considered the main component of licorice root means to longevity.

- Vitamin A (retinol)

Vitamin A (retinol) - fat-soluble vitamin, an antioxidant, and is essential for vision bones and healthy skin, hair and the immune system. Retinol is involved in redox processes, regulation of protein synthesis, promotes normal metabolism, functions of cellular and subcellular membranes and plays an important role in the formation of bones and teeth, as well as body fat; essential for the growth of new cells slows down the aging process.

Vitamin A is good to fight viruses and bacteria, it helps to strengthen the nails, the speedy healing of wounds.

Good effect on the reproductive system of men and women, increases the activity of the production of sex hormones.

- Vitamin E (tocopherol)

Vitamin E (tocopherol) is a fat-soluble vitamin. It is an antioxidant, i.e. protects cells from pathological peroxidation, which leads to their death and aging. With a lack of vitamin E cells become susceptible to the action of toxic substances, will be damaged, weakened immunity. Vitamin E is necessary for all tissues of the body. It protects blood cells red blood cells, improves oxygen transport to the tissues.

Veliko vitamin important for the reproductive system, it is often referred to as "vitamin of reproduction." When vitamin deficiency in men is reduced sperm production, women are

menstrual disorders, decreased libido. Vitamin E has a weak estrogen-like action, so it can partially offset the adverse effects of estrogen deficiency such as decreased libido, dry mucous membranes of the genital organs, depression, menopause (hot flashes, sweating, mood changes).

- Polyunsaturated fatty acids Omega-3

Omega-3 - is polyunsaturated fatty acids (alpha-linolenic, eicosatrienoic, eicosapentaenoic acid and other). Reduces the content in the body of cholesterol, triglycerides and low-density lipoprotein, inhibit the development of atherosclerosis, cardiovascular and rheumatic diseases, thrombosis, and normalize metabolic processes.

Directions

Adults 1 tablet a day during mealtimes. Duration 4-6 weeks. If necessary, you can repeat. Possible re-receptions throughout the year.

Form release:

30 capsules of 0,3 g.

Production

Scientific and Production Center of Revitalization and Health

St. Petersburg University of Bioregulation and Gerontology
